# Limb lengthening and reconstruction

Reviewed by SickKids Hospital Staff Last updated: October 8<sup>th</sup> 2019

## Exercises to manage edema and improve range of motion with a femoral frame

Following surgery, your child will experience some edema (swelling) and stiffness. Regular exercises will help your child minimize swelling and maintain range of motion and muscle strength.

## Managing edema

It is important to keep the leg elevated above the heart when resting and to perform regular ankle pumps and circles.

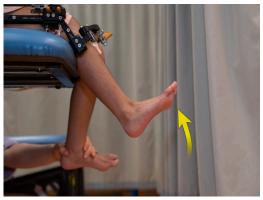

#### Ankle pump and circles

Starting position: Sitting on a bed or a chair with leg extended straight

- 1. Move the ankle to bring the toes and foot towards the face.
- 2. Move the foot back down like it is pushing on a gas pedal.
- 3. Move the ankle in circles in both directions. It might help to imagine drawing a circle with the big toe.

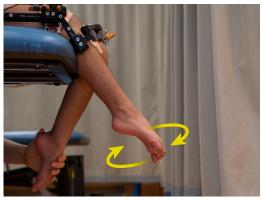

Do \_\_\_\_ pumps and circles (each direction) every hour or if your child is sitting for a long time.
